

Power your life with 100% renewable energy.

We all use electricity. Why not feel great about where it comes from?

Sonoma Clean Power is the only power provider in California to offer you the option of 100% renewable, locally generated energy 24/7. For about \$13 more per month (based on an average residential customer), you can power your home with EverGreen.

Using solar during the day and geothermal when the sun goes down, EverGreen provides renewable energy every day of the year.

Choosing EverGreen is one of the most impactful climate actions you can take. EverGreen eliminates nearly all the greenhouse gas emissions from your electricity use. So keep doing what you love, and feel good about the energy that's powering your life.

Supporting local energy sources.

The Geysers is one of the largest geothermal power plants in the world - and it's right in our backyard! Geothermal energy is a baseload resource, meaning there is a constant supply.

The Geysers generate renewable energy 24/7 by turning reclaimed water into steam. Four miles beneath the Earth's surface, magma converts the water to steam. The steam turns a large turbine, then a generator converts the turbine's momentum to electrical energy.

Local solar projects supply the other side of EverGreen. Sonoma Clean Power worked with local landowners and solar developers to build 6 megawatts (MW) of small-scale solar in Mendocino and Sonoma counties. That's enough to power 1,800 homes.

SCP provides the renewable energy generated by these projects to its EverGreen customers. And as the commitment to EverGreen grows, so does the support to build more local energy sources.

24/7

Businesses leading by example.

Our choices make a big difference. And for business owners, your influence may be even greater. Local beloved businesses are choosing EverGreen to reduce their emissions and make a statement. With EverGreen, inspire your customers and neighboring businesses to take climate action, too.
